## **Software Policy**

### **Licensing Policy for DigiPro for Windows**

DigiPro for Windows is copy protected. DigiPro licenses are based on the fee paid for the software. The 1-seat license allows DigiPro to be installed on one computer. The 3-seat license allows DigiPro to be installed on three different computers at a single location. The 4-10 seat license allows DigiPro to be installed on four to 10 computers at a single location.

At installation time, DigiPro generates a unique serial number for each computer. This serial number must be relayed to Slope Indicator so that we can generate an unlocking "key" code. The key code is different for each copy of DigiPro that is installed.

### **Licensing Policy for Custom Software**

Custom software from Slope Indicator, such as BSCWin, MultiMon, and GraphX, is copy protected and requires a key code for continued use. This software is sold with a license agreement that specifies installation on a specific number of computers. BCSWin, MultiMon, and GraphX require a password that is generated from the program's serial number.

### **Licensing Policy for Software Distributed on Slope Indicator's Website.**

With the exception of the protected software listed above, any software listed in the download section of Slope Indicator's website are available to the public free and may be installed on any number of computers.
